What is ccna salary

Something went wrong. Wait a moment and try again. Are you in the IT field as an entry level help desk associate or a junior LAN administrator and you want to work your way up the corporate ladder to a better paying job? You already have your CompTIA A+ or one of the lower level Microsoft certifications and you are wondering how do you get to the next tier and what skills do you need to make that next jump? Most network professionals will probably tell you that now that you have a basic understanding of the interface of how computers work, now you need to learn how the traffic on the network is managed and how it really works! So that leads us to the one of the most widely respected IT certifications out there, the Cisco Certified Network Associate or CCNA. CCNAs are given the task to setup, configure and administer corporate networks and since every company has a network, there is a huge demand for those who really know hardcore CCNA networking. You will learn the ins and outs of how traffic really moves across the network and how to sculpt it to be efficient and super-fast for your users while not wasting precious bandwidth. So you may be asking, what is the outlook for CCNA certified associates and what are they making now? Well, what would you say if I told you that the salary range for a CCNA according to a recent survey was from \$39,000 to \$119,000? You would be shocked as well as I was! So, let's take a look at a couple of data points and also try to dissect a little more of the information which is being provided. The survey sample was from just over 8,000 associates. The first problem I see with the survey below is we have a really wide range of skill sets. CCNA Salary As you see from the chart above, we are talking about five different job titles that all have the CCNA certification as a requirement. So since this article is really focused on how you can further your career and increase your salary, let's simply drop the top end of this salary survey for the IT Manager, Sr. Network Engineer, the Network Engineer which will leave us with probably the two valid stepping stone positions once your graduate from the Help Desk which are Network Administrator and/or Systems Administrator. So that gives us a realistic salary range of \$39,200 to \$86,491 which is more in line with what I see at the Fortune 500 Company I work for. That is great information on what a CCNA associate can make in salary, but does not really tell you how much more the CCNA certificate which will allow you to break into the Network Administrator position is worth over a basic Help Desk job. So let's take a look at another salary survey to determine the true value of the CCNA certification. Here is the salary survey for CompTia A+ certified Technology Specialists and Support Technicians. A+ Salary As you can see from the chart, the range for both starts in the mid \$29,000 range and then goes up to roughly \$70K depending on experience. But that gives us what we really need to do a fair comparison. For the most part an associate breaking into IT with simply an A+ certification will make let's call it \$30K in salary. Whereas a CCNA is going to start at around \$40K in salary. So that equates to roughly a 25% increase in salary to start with and then a career path that can grow to \$100K+ as you progress and gather other Cisco certifications. That seems pretty sweet to me! The CCNA (Cisco Certified Network Associate) is a highly sought-after routing and switching network, vendor-specific certification for IT professionals. The credential gives them the foundation they need to take their career in any direction. Cisco's CCNA is a great starting point and can be applied to any IT career path. The average salary for CCNA certification is \$79,000 (as of May 2021), according to PayScale; this is nearly 30% higher than the average salary in the United States. What is the average CCNA salary by city? Here is a breakdown of some of the best cities for CCNA-certified professionals in a position as a Network Engineer: San Jose: \$94,000 Washington D.C.: \$90,000 San Diego: \$85,000 New York City: \$79,000 Chicago: \$72,000 Houston: \$79,000 Raleigh: \$71,000 Dallas: \$79,000 Atlanta: \$72,000 Denver: \$79,000 Other: See all cities. What is the average CCNA salary by degree? Those with a CCNA certificate and degree could start at \$51,000 with the average salary for networking degree jobs being \$60,000. This salary figure does include those who have earned associate degrees, and, interestingly, there is not much difference in figures for professionals with different degree levels. The following shows how much each degree holder can expect to earn yearly, as per Salary.com. Network engineer I with an associate's degree is \$66,653 - \$71,233 Network engineer I with a bachelor's degree is \$67,944 - \$72,637 Network engineer II with an associate's degree is \$84,106 - \$89,866 Network engineer II with a bachelor's degree is \$84,557 - \$90,399 Network engineer III with an associate's degree is \$100,062- \$106,010 Network engineer III with a bachelor's degree or MBA is \$101,337 - \$107,340 However, having at least a bachelor's degree in computer science and engineering (or equivalent) is preferred for a CCNA to be considered for most open vacancies today. What is the average CCNA salary by job role? According to Cisco, a CCNA certification, "builds the skills you will be using throughout your career in IT, whatever the role." And this certification is a good choice for a number of job roles, including architects, engineers, analysts and IT support professionals. According to Payscale.com, the average salary for a CCNA professional in various positions is as follows: Network architect - \$118,000 Information technology (IT) director - \$108,000 Sr. Network engineer - \$102,000 Cyber security analyst - \$79,000 Information technology (IT) manager - \$87,000 Network engineer - \$76,000 Systems engineer (computer networking/IT) - \$76,000 Systems administrator - \$66,000 Network administrator - \$63,000 Different skills can affect salary. Below, for example, is how the pay of a network administrator is affected by the possession of different abilities. Switching and Routing ▲21% - average base salary is \$71,000 Switches & Firewall Installation and Administration ▲12% - average base salary is \$65,000 The job outlook for "network and computer systems administrators is projected to grow 4% from 2019 to 2029," according to the U.S. Bureau of Labor Statistics; a CCNA certification, that can help you get easier access to these positions, can represent the right move for both young professionals finding their right path and more seasoned professionals looking for a career change. What are the benefits of becoming CCNA certified? When Indeed surveyed 2,593 job seekers about their Cisco Certified Network Associate (CCNA), this is what they were told: 70% of job seekers said that the biggest reason for earning their Cisco Certified Network Associate (CCNA) was help in their career progression 67% said earning their Cisco Certified Network Associate (CCNA) helped them make more money 65% said earning their Cisco Certified Network Associate (CCNA) helped them get a job 95% said they would recommend a family member or friend earn their Cisco Certified Network Associate (CCNA) Becoming CCNA certified validates a professional's critical job skills, and shows the ability of network professionals to install and configure routers and switches for entire organizations, as well as troubleshoot any network issues. Though it is true you can get a job without certification, having a CCNA on your resume might make you more visible to recruiters and set you apart from the competition. In addition, with Cisco's market share of 49.9% of the global ethernet switch market in the third quarter of 2020, there are many possibilities that a professional might find that technology on his or her path when applying for jobs in many organizations. Another reason to get Cisco certified? Salary. "Cisco certified professionals see an average salary increase of \$12,000-13,000" (Source: 2020 IT Skills and Salary Report, Global Knowledge). How can I become CCNA certified? To earn a CCNA, a professional needs to pass a proctored exam, created by Cisco, to demonstrate abilities in how to run a network. To be eligible, candidates should have one or more years of experience implementing and administering Cisco solutions, as well as have a good understanding of the following CCNA topics: The 200-301 CCNA - Cisco examination lasts 120 minutes and costs \$300. It is offered in English and Japanese. The Cisco Learning Network features a CCNA Prep program to guide professionals in their self-study journey in becoming certified. An exam blueprint is available, featuring the CCNA exam topics. There are also plenty of additional, online CCNA study resources (free and paid) that can help you pass this examination. How hard is the Cisco CCNA? The Cisco CCNA is an entry-level certification exam, but it is still challenging because it requires testers to have both technical networking knowledge and hands-on configuration skills on vendor-specific equipment. When ready for the test, go through Pearson VUE to schedule for the certification exam and to locate a test center near you. Note: The exam can be conveniently taken from your home or office through OnVUE online proctoring. So, is the CCNA right for you? As organizations continue to build up resilience in their networks, highly skilled professionals are in high demand to maintain and secure the infrastructures companies and organizations depend on every day. The CCNA certification makes sense to test and verify your fundamental knowledge on the latest networking technologies, security and automation and programmability skills. There are a lot of reasons you might want to pursue this certification if you're passionate about the subject and career it offers. The CCNA can make you more visible to recruiters, as this credential is one of the most valuable IT certifications today; the 2020 Robert Half Technology Salary Guide explains how this respected associate-level designation has proven valuable to boost one's career significantly, in terms of annual earnings and for access to more niche positions.
